PREPARATION OF THIS DOCUMENT

This indexed bibliography was prepared to help researchers and field workers involved with cage fish culture in retrieving information of particular interest to them.

The titles are listed in alphabetical order of authors' names and in chronological order under each author. Taxonomic, geographic and subject indexes provide further bases for retrieving the data as required.

The abbreviations of the titles of books and periodicals are based on the American Standards Institute, Standards Committee 239, prepared for the UNISIST/ICSU-AB Working Group on Bibliographic Descriptions.

INTRODUCTION

By definition, the cultivation of fish in cages[1/] generally consists of raising a group of fish in a volume of water enclosed on all sides, including the bottom, while permitting the free circulation of water through the rearing units.

Cage culture allows a considerable increase in fish production in existing water bodies. Particularly well developed in a few countries, research is currently being pursued in numerous others, while in developing nations, interest in this method is growing fast.

This bibliography was assembled to partly fulfil the existing lack of worldwide information on this subject, both in marine and in continental waters. Although all possible efforts were made by the compiler to include all important and available literature, no completeness can be claimed. Suggestions for additions and corrections will be greatly appreciated. It is hoped that they will contribute later to a revised edition of the present list, to be as far as possible processed by computer.

1/ Some authors use "pens" or "baskets" as synonyms to "cages".
